

Motorola PM100D Driver v2.0beta Release Notes

The PM100D driver v2.0beta is a tool that enables developers to create NewtonScript applications to access the DataTAC 4000 (ARDIS) or DataTAC 5000 networks.

The driver currently supports the Newton 1.x NewtonScript CommScripting API. 1.x CommScripting is supported in the Newton 2.0 OS. For further information, please refer to the developer documentation in the file "RPMNative Doc.pdf" accompanying this distribution.

Known bugs:

* Newton resets obtaining modem info (-16019) "Connection end was not bound before use". If unable to obtain modem info then turn off radio and reset Newton
